

Project Design Phase-II Technology Stack (Architecture & Stack)

Date	03 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	4 Marks

Technical Architecture:

Table-1: Components & Technologies:

S. No	Component	Description	Technology
1	Data Source	Collects food ordering data such as customer details, restaurants, orders, and ratings from CSV files.	CSV / Excel
2	Data Preparation	Cleans, filters, and transforms raw data before analysis.	Tableau Prep / SQL
3	Data Storage	Stores the processed and structured data for visualization.	CSV / MySQL
4	Analytics & Visualization	Creates interactive charts, dashboards, and reports to analyse consumer behaviour and ordering trends.	Tableau
5	Insights & Reporting	Generates business insights on popular cuisines, peak order times, customer preferences, and restaurant performance.	Tableau Dashboard
6	Data Filtering	Enables users to filter data by city, cuisine, restaurant, order type, and date for detailed analysis.	Tableau Filters
7	Dashboard & Reporting	Presents interactive dashboards and summary reports to support data-driven decision making.	Tableau Public / Tableau Desktop

Table-2: Application Characteristics:

S. No	Characteristics	Description	Technology
1	Interactive Dashboard	Allows users to explore data using filters and visualizations.	Tableau
2	Data Visualization	Displays trends using charts, graphs, and maps.	Tableau
3	Data Analysis	Displays trends using charts, graphs, and maps.	Tableau Calculations / SQL
4	Performance	Generates dashboards with fast loading and smooth interaction.	Tableau
5	Scalability	Supports analysis of large datasets with additional records.	Tableau
6	Data Accuracy	Ensures reliable and consistent insights from cleaned datasets.	Tableau Prep / SQL
7	Reporting	Creates interactive reports for business decision-making.	Tableau Dashboard
