

Project Performance Test

Date	09 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	The food ordering dataset was successfully imported into Tableau. It contains customer details, restaurant information, order details, ratings, payment methods, and delivery-related attributes used for analysis.  The screenshot displays the Tableau Public interface. The main view shows a table named 'food_ordering_behavior_dataset' with 19 fields and 50,000 rows. The columns are: Order Id, User Id, Age, City, Order Time, Day Type, and Cuisine. The interface also shows a file explorer on the left with various CSV and TXT files. A 'Go to Worksheet' button is visible at the bottom of the screenshot.

2.	Data Preprocessing	Data preprocessing involved handling missing values, correcting data types, removing duplicate records, renaming columns, and preparing the dataset for accurate visualization and analysis.
3.	Utilization of Filters	Interactive filters such as City, Cuisine, Restaurant Name, Order Date, Rating, and Payment Method were implemented to allow users to explore data dynamically and generate customized insights. Filters Marks Pie Color Size Label Detail Tooltip Angle Cuisine Cuisine CNT(Order I.. Δ Cuisine Preference Distribution South Indian 16.60% Biryani 16.60% Chinese 16.70% Desserts 16.90% Fast Food 16.74% North Indian 16.46%
4.	Calculation fields Used	Calculated fields including Total Orders, Average Rating, Total Revenue, Average Order Value, and Order Count were created to measure key business performance indicators and customer trends. city filterr IF [City] = [City Parameter] THEN TRUE ELSE FALSE END The calculation is valid. Apply OK

5.

Dashboard design

The dashboard was designed using interactive charts, KPIs, bar graphs, line charts, pie charts, and filters to provide a comprehensive view of customer behaviour, restaurant performance, and food ordering trends.
