

Project Design Phase
Proposed Solution Template

Date	05 July 2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Food delivery businesses and restaurants generate large amounts of customer and order data, but it is difficult to identify customer preferences, ordering patterns, peak order times, and restaurant performance using raw data alone.
2.	Idea / Solution description	Develop an interactive Tableau dashboard that transforms raw food ordering data into meaningful visualizations, enabling analysis of consumer behaviour, restaurant performance, spending patterns, and ordering trends.
3.	Novelty / Uniqueness	The solution combines multiple business metrics such as customer behaviour, cuisine preferences, order trends, payment methods, geographical analysis, and restaurant performance into a single interactive dashboard with dynamic filters and KPIs.
4.	Social Impact / Customer Satisfaction	The insights help restaurants improve service quality, reduce delivery delays, understand customer preferences, and offer better food recommendations, leading to higher customer satisfaction.
5.	Business Model (Revenue Model)	Restaurants and food delivery platforms can use the dashboard as a Business Intelligence (BI) solution through subscription-based analytics services or

		enterprise dashboard licensing for data-driven decision-making.
6.	Scalability of the Solution	The solution can be easily scaled to support larger datasets, multiple cities, additional restaurants, and real-time data integration, making it suitable for both small businesses and large food delivery platforms.
